## CENTAURUS ENERGY INC. ANNOUNCES 2020 FINANCIAL RESULTS AND OPERATIONAL UPDATE

*(All dollar figures are expressed in United States Dollars)*

Buenos Aires, Argentina, July 14, 2021 – Centaurus Energy Inc. ("Centaurus" or the "Company") (TSXV: CTA, OTCQB: CTARF) is pleased to announce its financial and operating results for the three and twelve months ended December 31, 2020.

As previously stated in the Company's press releases dated April 26, 2020, May 4, 2021, and July 8, 2021, the Company was delayed in the filing of its audited annual financial statements, accompanying management discussion and analysis and related CEO and CFO certifications for the year ended December 31, 2020 (the "Annual Filings") and the Company applied for and was granted, by the Alberta Securities Commission, a management cease trade order in respect of the Company's delayed Annual Filings (the "MCTO"), which was ultimately extended until July 14, 2021.

### **SUMMARY FINANCIAL AND OPERATIONAL RESULTS**

Selected information is outlined below and should be read in conjunction with Centaurus' audited consolidated financial statements for the three and twelve months ended December 31, 2020 and the associated management's discussion and analysis ("MD&A") for the year ended December 31, 2020, which are available for review under the Company's profile at [www.sedar.com](http://www.sedar.com) and on the Company's website at [www.ctaurus.com](http://www.ctaurus.com)

(1) This table contains the term "funds flow from continuing operations" and "working capital", which are non-GAAP measures and should not be considered an alternative to, or more meaningful than "cash flows from operating activities" as determined in accordance with International Financial Reporting Standards ("IFRS") as an indicator of the Company's performance. Working capital, funds flow from operations and funds flow from operations per share (basic and diluted) do not have any standardized meanings prescribed by IFRS and may not be comparable with the calculation of similar measures for other entities. Management uses funds flow from continuing operations to analyze operating performance and considers funds flow from continuing operations to be a key measure as it demonstrates the Company's ability to generate the cash necessary to fund future capital investment. The reconciliation between funds flow from continuing operations and cash flows from operating activities can be found in the MD&A. Funds flow from continuing operations per share is calculated using the basic and diluted weighted average number of shares for the period, consistent with the calculations of earnings (loss) per share. Working capital is computed as current assets less current liabilities. Management uses working capital to measure liquidity and to evaluate financial resources.

(2) Operating netback is a non-GAAP measure calculated as the average per boe of the Company's oil and gas sales, less royalties and operating costs.

(3) Includes non-cash additions related to CASE \$969 (three months) and \$8,622 (twelve months).

**Reader Advisories**

***Non-GAAP Measurements***

*The Company utilizes certain measurements that do not have a standardized meaning or definition as prescribed by IFRS and therefore may not be comparable with the calculation of similar measures by other entities, including operating netback, funds flow from continuing operations and working capital. Readers are referred to advisories and further discussion on non-GAAP measurements contained in the Company's MD&A. Operating netback is a non-GAAP measure calculated as the average per boe of the Company's oil and gas sales, less royalties and operating costs. Funds flow from continuing operations per share is calculated using the basic and diluted weighted average number of shares for the period, consistent with the calculations of earnings (loss) per share. Working capital is computed as current assets less current liabilities.*

***Meaning of Boe***

*The term "boe" or barrels of oil equivalent may be misleading, particularly if used in isolation. A boe conversion ratio of six thousand cubic feet of natural gas to one barrel of oil equivalent (6 Mcf: 1 bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Additionally, given that the value ratio based on the current price of crude oil, as compared to natural gas, is significantly different from the energy equivalency of 6:1; utilizing a conversion ratio of 6:1 may be misleading as an indication of value.*
